Ideation Phase
Define the Problem Statements

Date	04 October 2026
Team ID	SWTID-2026-5690
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	A ServiceNow service desk agent / ITIL user who logs incidents on the Incident form every day.
I'm trying to	List their outcome or "job" they care about - what are *they trying to achieve?*	Create an incident quickly with complete, accurate and consistent details so it is routed to the right team.
but	Describe what problems or barriers stand in the way - what *bothers them most?*	Mandatory and dependent fields are not enforced, so incidents are saved with missing or inconsistent data.
because	Enter the "root cause" of why the problem or barrier *exists - what needs to be solved?*	The Incident form has no Client Scripts or UI Policies to validate input or control field behaviour dynamically.
which makes me feel	Describe the emotions from the customer's point of *view - how does it impact them emotionally?*	Frustrated and slowed down, because incidents need rework and follow-ups to correct the data.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A service desk agent / ITIL user who logs incidents in ServiceNow	Create an incident quickly with complete and accurate details	Mandatory and dependent fields are not enforced, so incidents are saved with missing or inconsistent data	The Incident form has no Client Scripts or UI Policies to validate input or control fields	Frustrated and slowed down by rework
PS-2	A support analyst (resolver) who works and closes incidents	Resolve and close incidents with proper resolution details	Incidents can be closed without close notes, and unneeded fields clutter the form	Resolution fields are not shown or made mandatory based on State, and no checks run on submit	Overloaded and concerned about poor record quality
